**DUNS:** 96-6474918, Federal ID: 77-0379214, CAGE Code: **1W9S9**  
Part Number: IWWTVRT-1, Public Address Set, **NSN:** 5830-01-552-7400

**SOLE SOURCE STATEMENT:** The Voice Response Translator (VRT) is the only eyes-free/hands-free translator capable of working in high-noise combat environments. The VRT provides instant voice-to-voice language translation without compromising weapon readiness or situational awareness. This capability means that the user can maintain eye contact and weapon readiness in combat situations while using the VRT. This capability meets a fundamental requirement for combat personnel using voice-to-voice translators. The VRT is also the only voice-to-voice translator that fits in a M4 single ammo pouch for easy use during combat. Further, the system lasts at least 65 hours on a single charge, significantly longer than any other system. The VRT is a proprietary system developed and built by Integrated Wave Technologies, Inc. and is

available only from the manufacturer. Unlike other systems, the VRT holds all available languages in a single module, making it the most effective and versatile translation tool.
